One opening. One continuous story.

Direction 3 hero + ivory colors / Direction 4 organic geometry / Berth Schedule structure

Follow one 30-minute opening from the departure board through constraints, candidate review and the one-week replay offer.

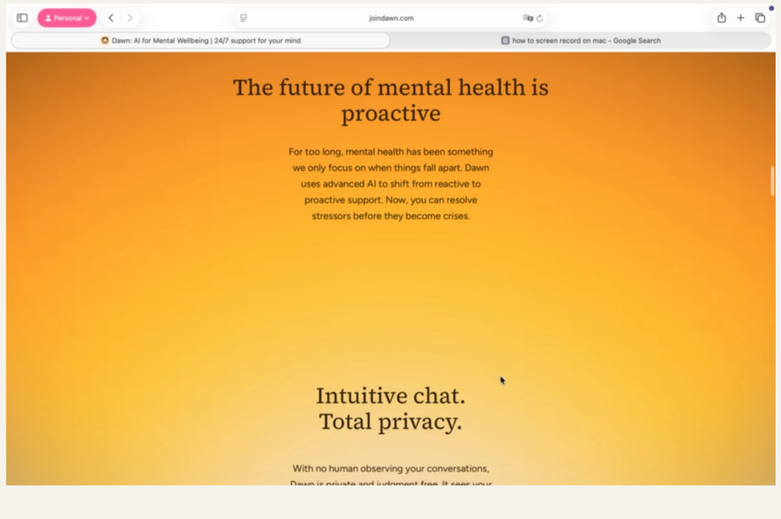

The motion rule
Scroll reveals evidence. A person makes the decision.

Delivery
15 desktop keyframes, motion cues, background choreography, mobile plan, state rules and route coverage.

Designed for native scrolling with a single bounded pinned sequence. These are storyboard compositions, not implementation screenshots; final UI details remain subject to layout QA.

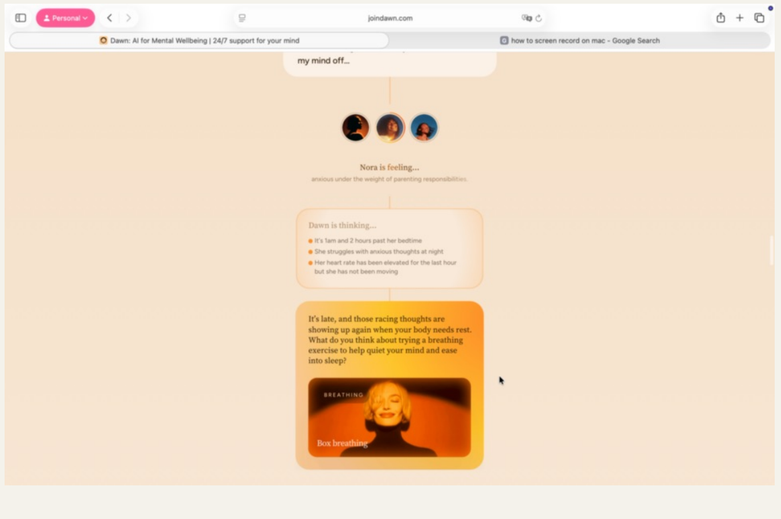

What the reference video teaches

Observed recording positions locate scenes; they are not measured animation durations.

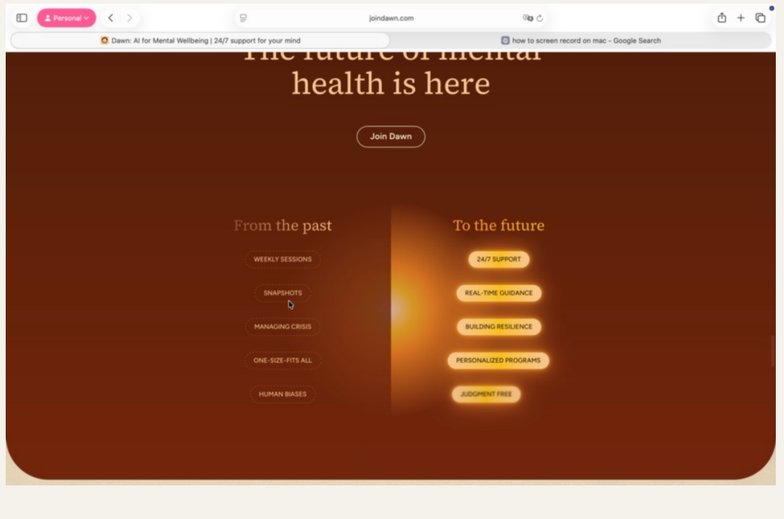

00:08 / A shared atmosphere

Large tonal fields carry the story. Use ivory, stone and cream, with no new palette at every section.

00:20 / Connected reasoning

Content appears along one visible connector. Adapt it into operational facts, evidence and reviewer ownership.

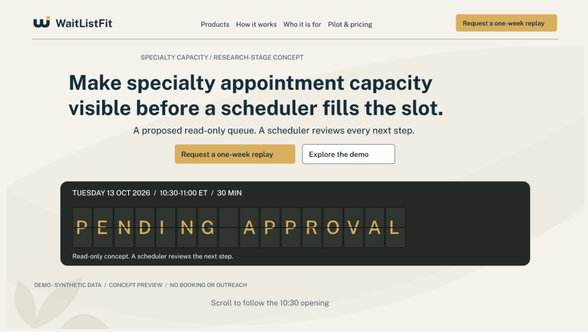

00:36 / A contrast chapter

A darker inset creates emphasis. Reserve ink for the hero board and the uncertainty inspection scene.

Also observed: a recurring arc at 00:04 and 00:44; gradual content reveals around 00:12-00:28; reverse scrolling at 00:52-01:00. The 01:04 window resize is not a mobile QA result. Do not copy Dawn portraits, testimonials or health claims.

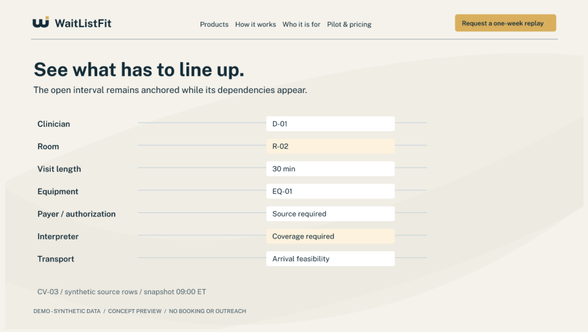

The background is a stage, not a stack

Keep one warm visual world; let the shared shapes change their framing.

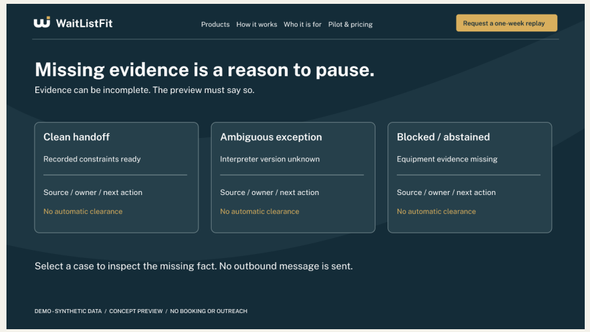

Arrival

Curves visible; leaves at lower left. Near-white reading area.

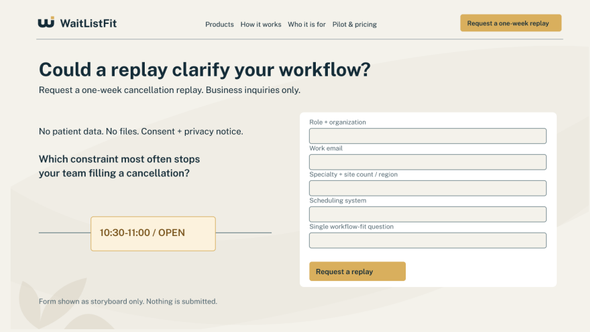

Constraints

Same shapes enlarge 1.00 to 1.08 and shift at most 32px.

Inspection

An ink inset overlays the ivory world; its curved edge exits naturally.

Invitation

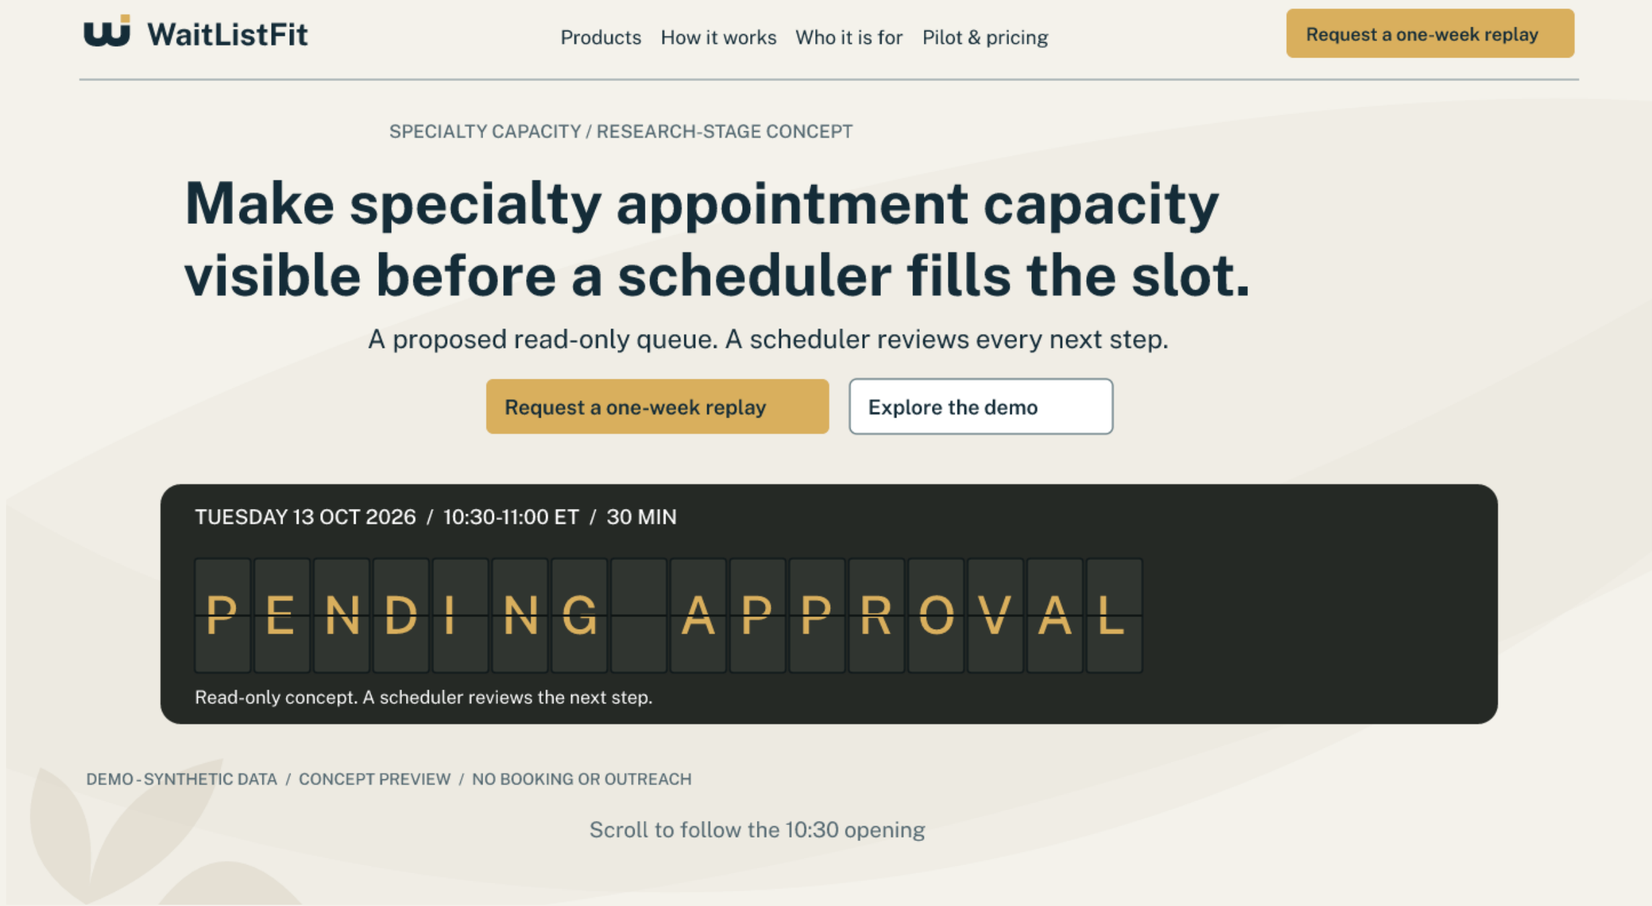

Return to the opening geometry, quieter behind the inquiry.

Layers: solid ivory base (#F4F2EB); cream light (#F8F6F0); low-opacity stone ellipses (#E8E4DA); one restrained leaf cluster; a separate amber story line. Text stays still while background transforms remain shallow.

Transitions: interpolate framing across section boundaries. Do not animate hue into mint/blue. Avoid visible resets, giant moving gradients, repeated leaf clusters or independent parallax on every card.

01 / Arrival

Provisional desktop section height: 100svh / artboard: 1440 x 810

TRIGGER / ENTRY

0-70%: hold. 70-100%: the 10:30 tile becomes the next scene anchor.

VISIBLE RESTING STATE

The complete headline and CTAs are visible immediately. Optional 420ms flap resolves once to PENDING APPROVAL. No repeated typing.

BACKGROUND

Ivory base with reference-shaped ellipses and lower-left leaves. Curves move at most 32px; leaf cluster leaves with the hero.

Transition to the next scene

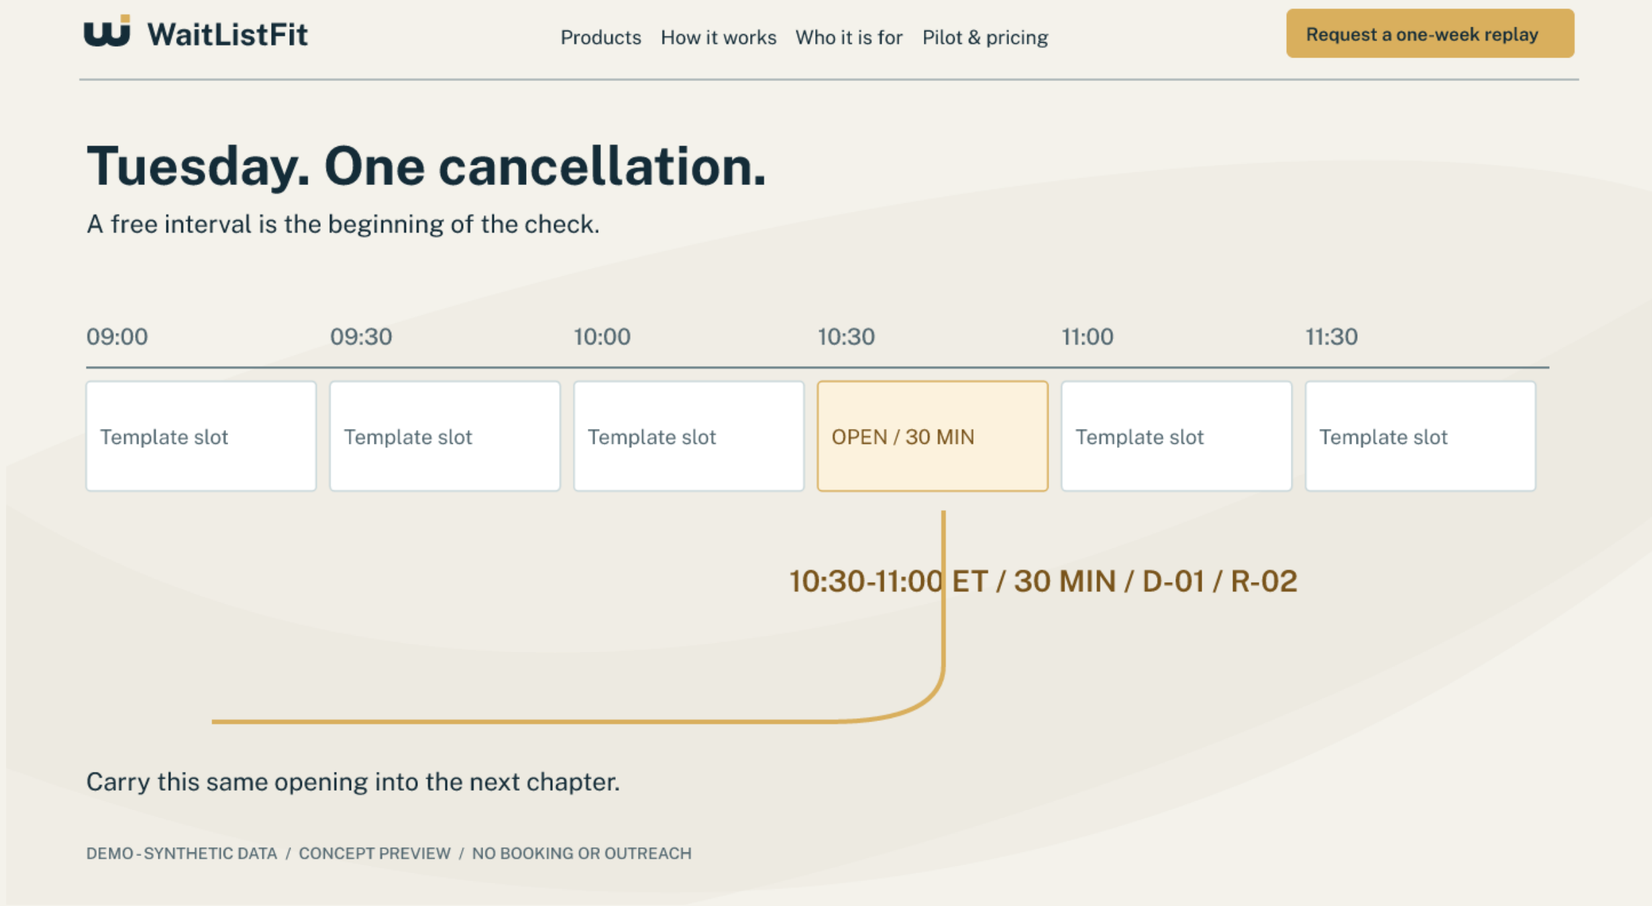

The board time tile visually aligns to the timetable slot. Crossfade over 280ms; do not shrink the entire board into tiny unreadable text.

Mobile / reduced-motion reading order

Headline and a compact two-line status board; no letter-by-letter flip. CTAs precede the board.

02 / Cancellation

Provisional desktop section height: 90svh / artboard: 1440 x 810

TRIGGER / ENTRY

On entry, the cancellation block lifts 12px and fades over 280ms.

VISIBLE RESTING STATE

The open 10:30-11:00 interval stays visible. One amber emphasis pulse, then still. Surrounding timetable slots anchor the original template.

BACKGROUND

Warm stone shape rises behind the open interval; retain the same background object.

Transition to the next scene

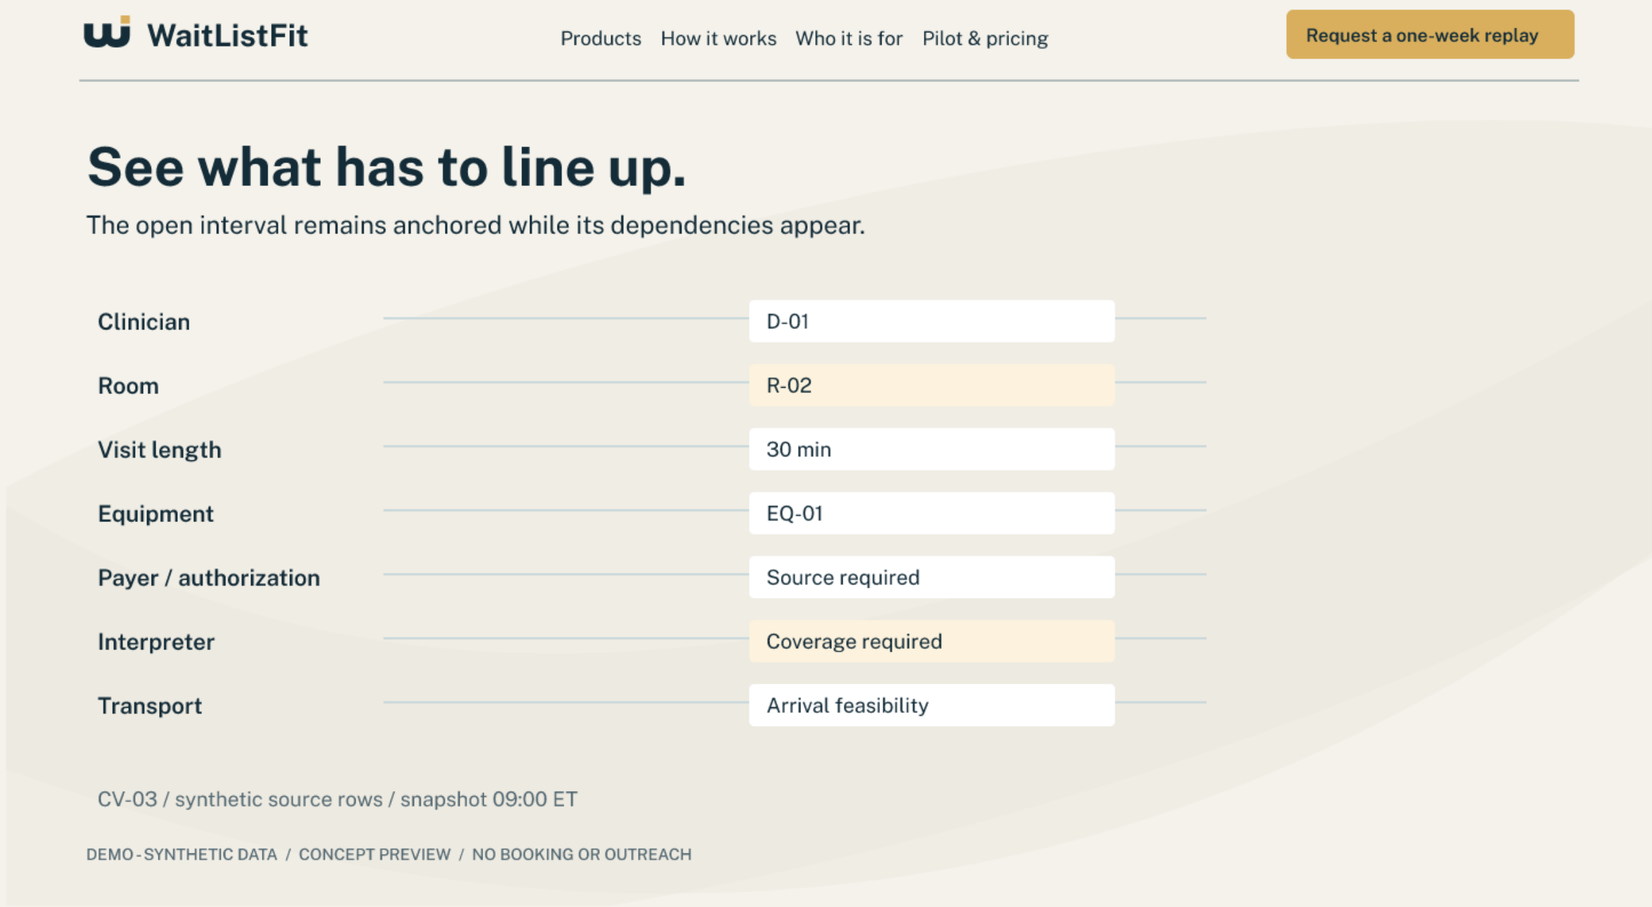

The interval stretches horizontally into seven labelled constraint lanes.

Mobile / reduced-motion reading order

Show three neighboring times and the open interval; all other slots can collapse to a summary.

03 / Constraints

Provisional desktop section height: Shared 250svh with 04-05 / artboard: 1440 x 810

TRIGGER / ENTRY

Pinned travel 0-33%: reveal seven lanes; hold labels before proceeding.

VISIBLE RESTING STATE

Clinician, room, duration, equipment, payer/authorization, interpreter and transport are visible. Eligibility is an administrative source field, never a clinical verdict.

BACKGROUND

Same ivory plane; background movement pauses during dense evidence.

Transition to the next scene

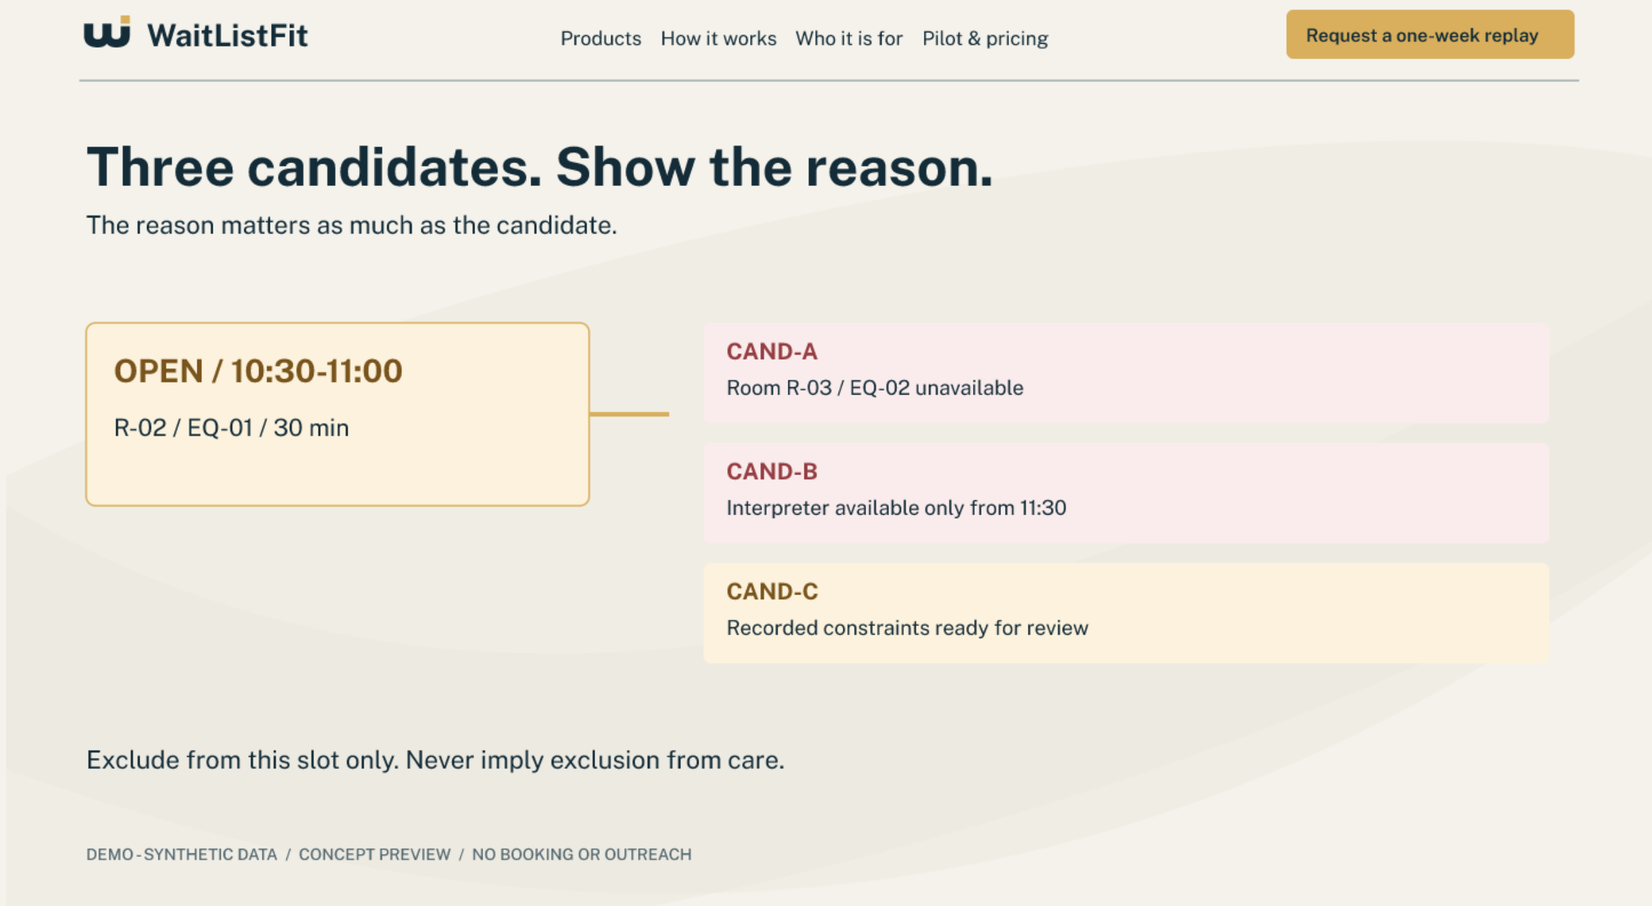

Room and interpreter lanes extend toward candidate rows; keep the open slot fixed.

Mobile / reduced-motion reading order

Stack all seven lanes as a normal document. No pinned map, clipped labels or horizontal-only controls.

04 / Candidates

Provisional desktop section height: Shared 250svh with 03-05 / artboard: 1440 x 810

TRIGGER / ENTRY

Pinned travel 33-66%: reveal A, B, C in order with 100ms offsets.

VISIBLE RESTING STATE

A: room/equipment unavailable. B: interpreter not available at 10:30. C: pending scheduler review. Dim decorative card surfaces, not the text.

BACKGROUND

Background is held still; amber follows the selected open interval, not a patient ranking.

Transition to the next scene

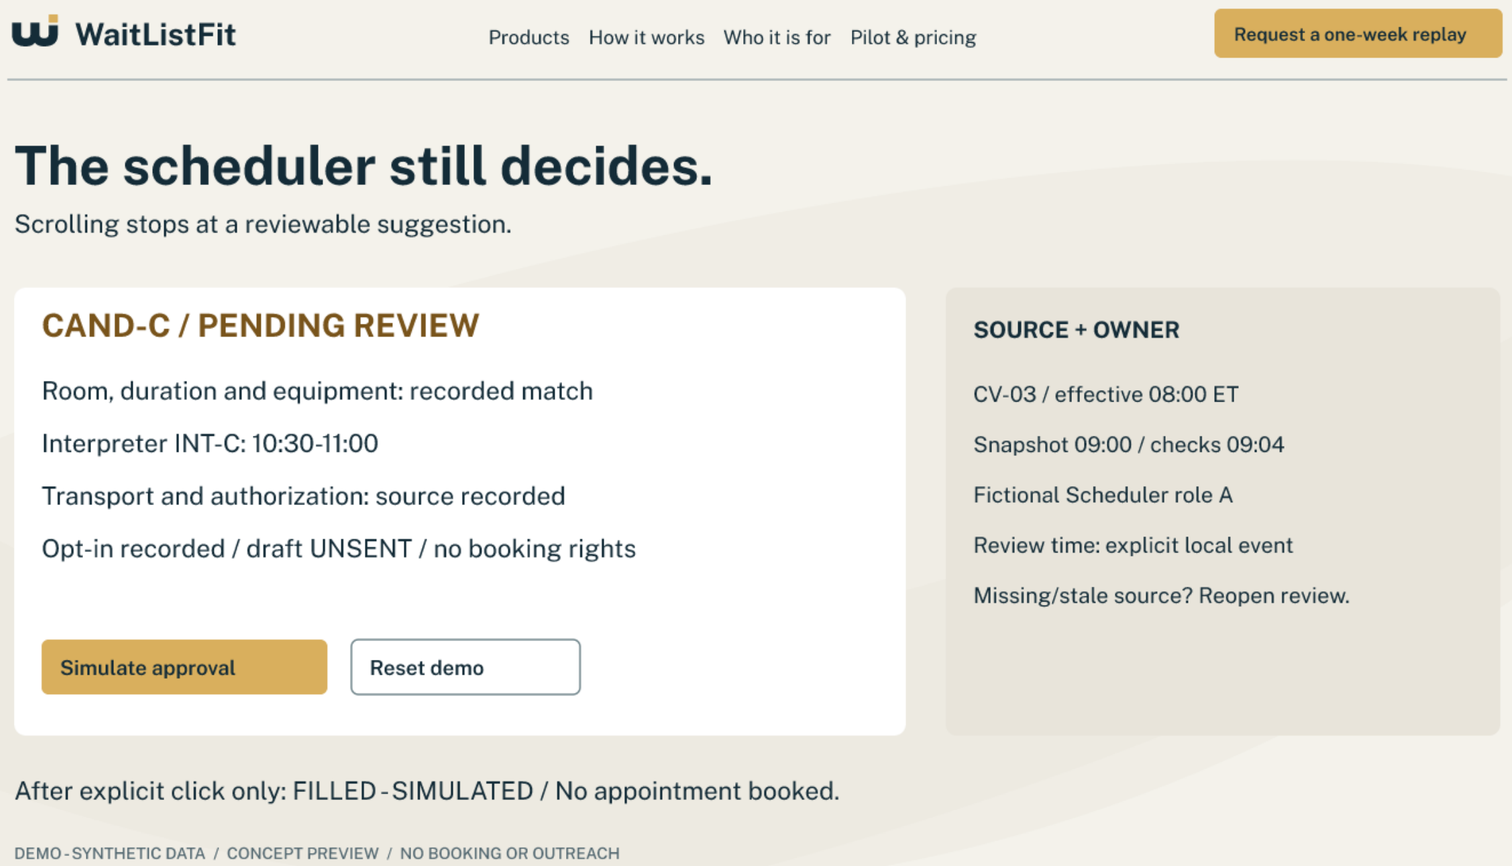

C opens into a review packet; excluded candidates remain summarized alongside.

Mobile / reduced-motion reading order

Three stacked cards with reason text and an evidence disclosure. No carousel required.

05 / Review

Provisional desktop section height: Shared 250svh with 03-04 / artboard: 1440 x 810

TRIGGER / ENTRY

Pinned travel 66-100%: hold pending state; unpin into normal scroll.

VISIBLE RESTING STATE

Click Simulate approval only after evidence review. Local result: FILLED - SIMULATED, with No appointment booked. Actual case state is Reviewed handoff; draft remains UNSENT.

BACKGROUND

Ivory surface, quiet backdrop, stable controls. Scroll never triggers a decision.

Transition to the next scene

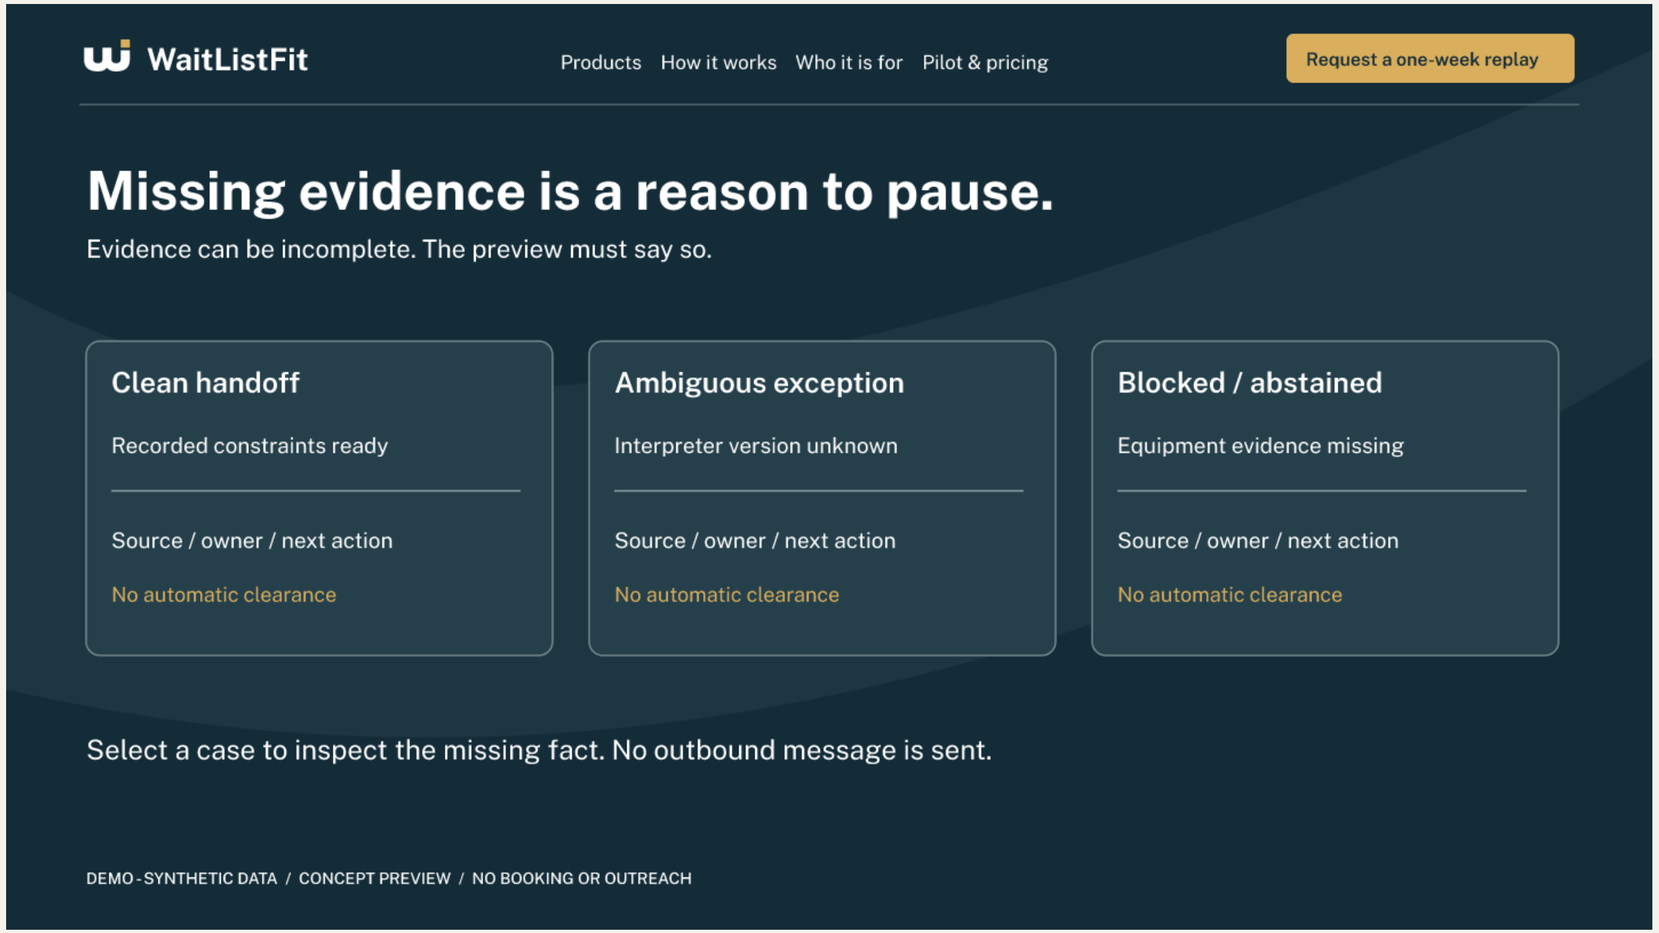

The audit event becomes the connector to the exception section; scrolling onward is always possible without clicking.

Mobile / reduced-motion reading order

Evidence appears before the action. Button and Reset are keyboard reachable; keep form focus stable.

06 / Exceptions

Provisional desktop section height: 90svh / artboard: 1440 x 810

TRIGGER / ENTRY

Click case tabs; scroll only reveals the resting default.

VISIBLE RESTING STATE

Clean, ambiguous and blocked cases. Unknown interpreter/authorization evidence stays unresolved. Missing equipment and override rights cause abstention, not a guessed match.

BACKGROUND

A dark ink inset opens with a curved ivory boundary; the outer page stays warm.

Transition to the next scene

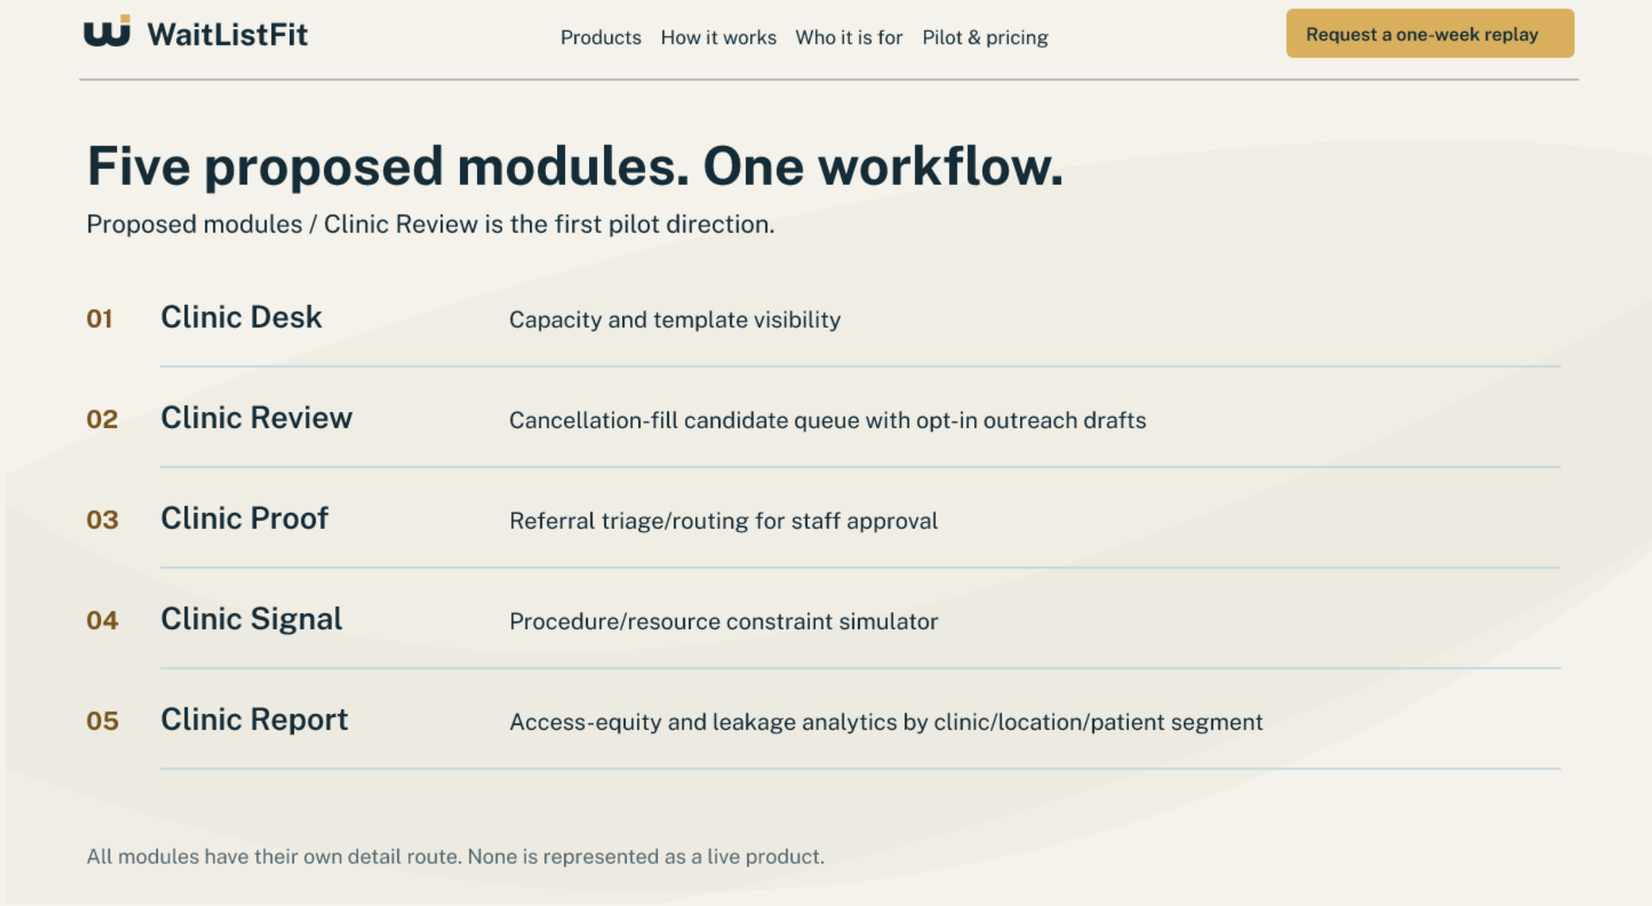

The evidence connector becomes five editorial module rules as the dark inset ends.

Mobile / reduced-motion reading order

Three full-width case buttons and inline details; all states remain accessible without motion.

07 / Modules

Provisional desktop section height: 150svh; content may extend / artboard: 1440 x 810

TRIGGER / ENTRY

Each row enters when its top reaches 80% of viewport. 160ms fade, no staggered waiting.

VISIBLE RESTING STATE

Five distinct editorial rows in source order. Review is marked First pilot direction. Mini-scenes explain visibility, queue, routing, simulation and segmented analysis.

BACKGROUND

Ivory returns through a curved boundary; no new unrelated gradient.

Transition to the next scene

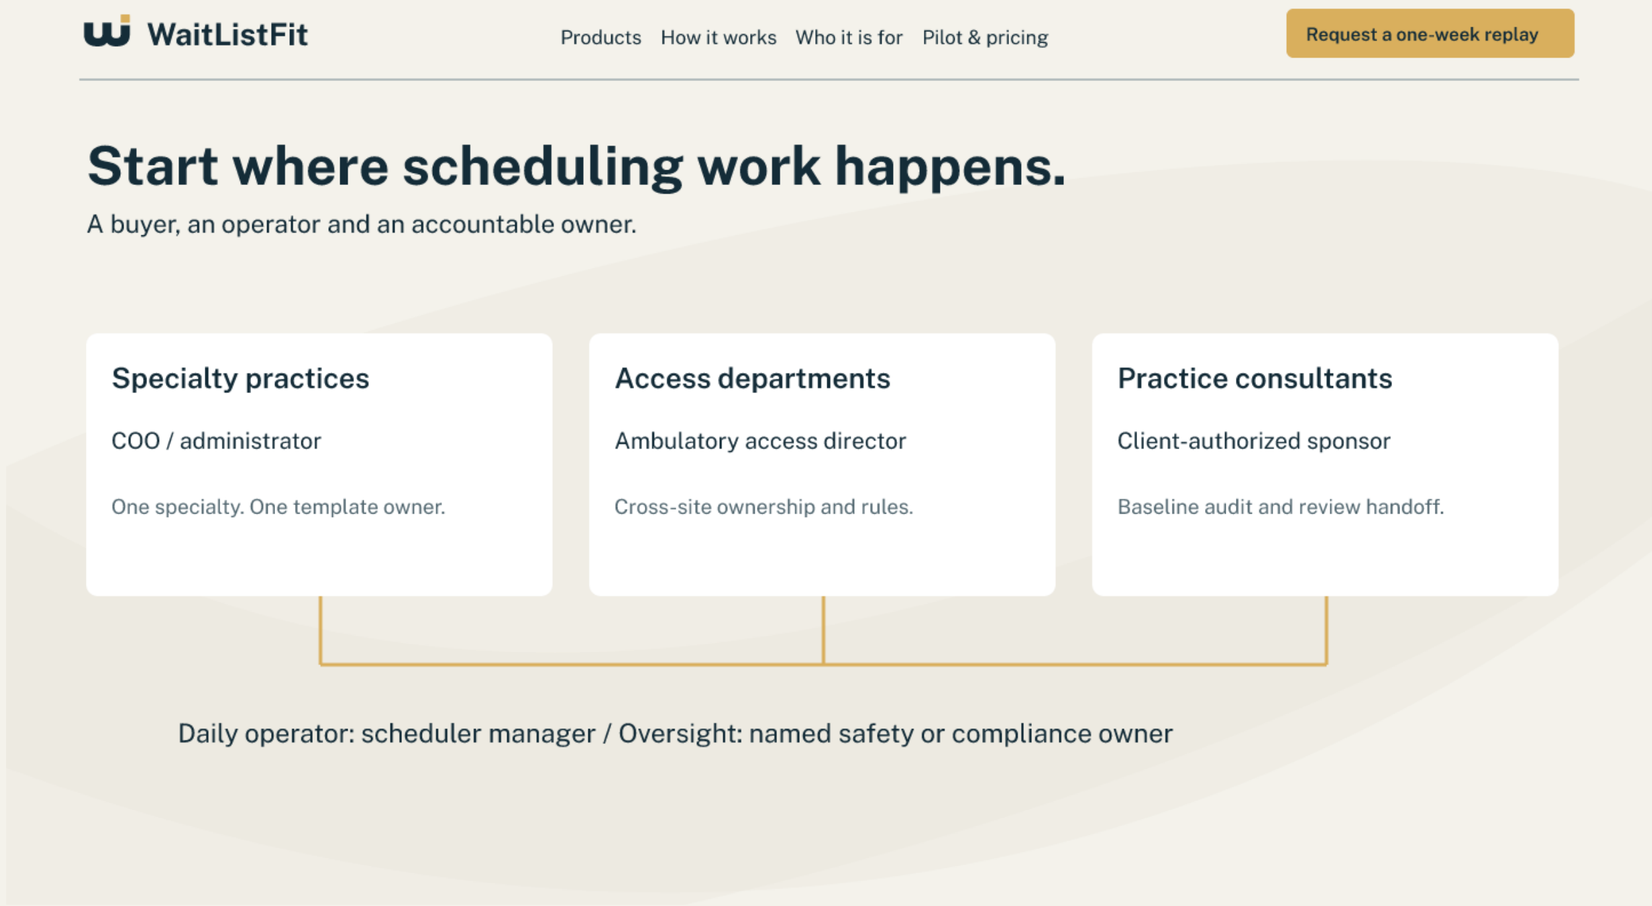

The Review row becomes a small handoff packet carried into audience roles.

Mobile / reduced-motion reading order

Five ordinary stacked rows with full descriptors and links.

08 / People

Provisional desktop section height: 80svh / artboard: 1440 x 810

TRIGGER / ENTRY

Scroll reveals roles; selecting a role changes its descriptive panel.

VISIBLE RESTING STATE

Specialty practices, access departments and practice-management consultants.
COO/access director buys; scheduler manager operates; oversight owner reviews guardrails.

BACKGROUND

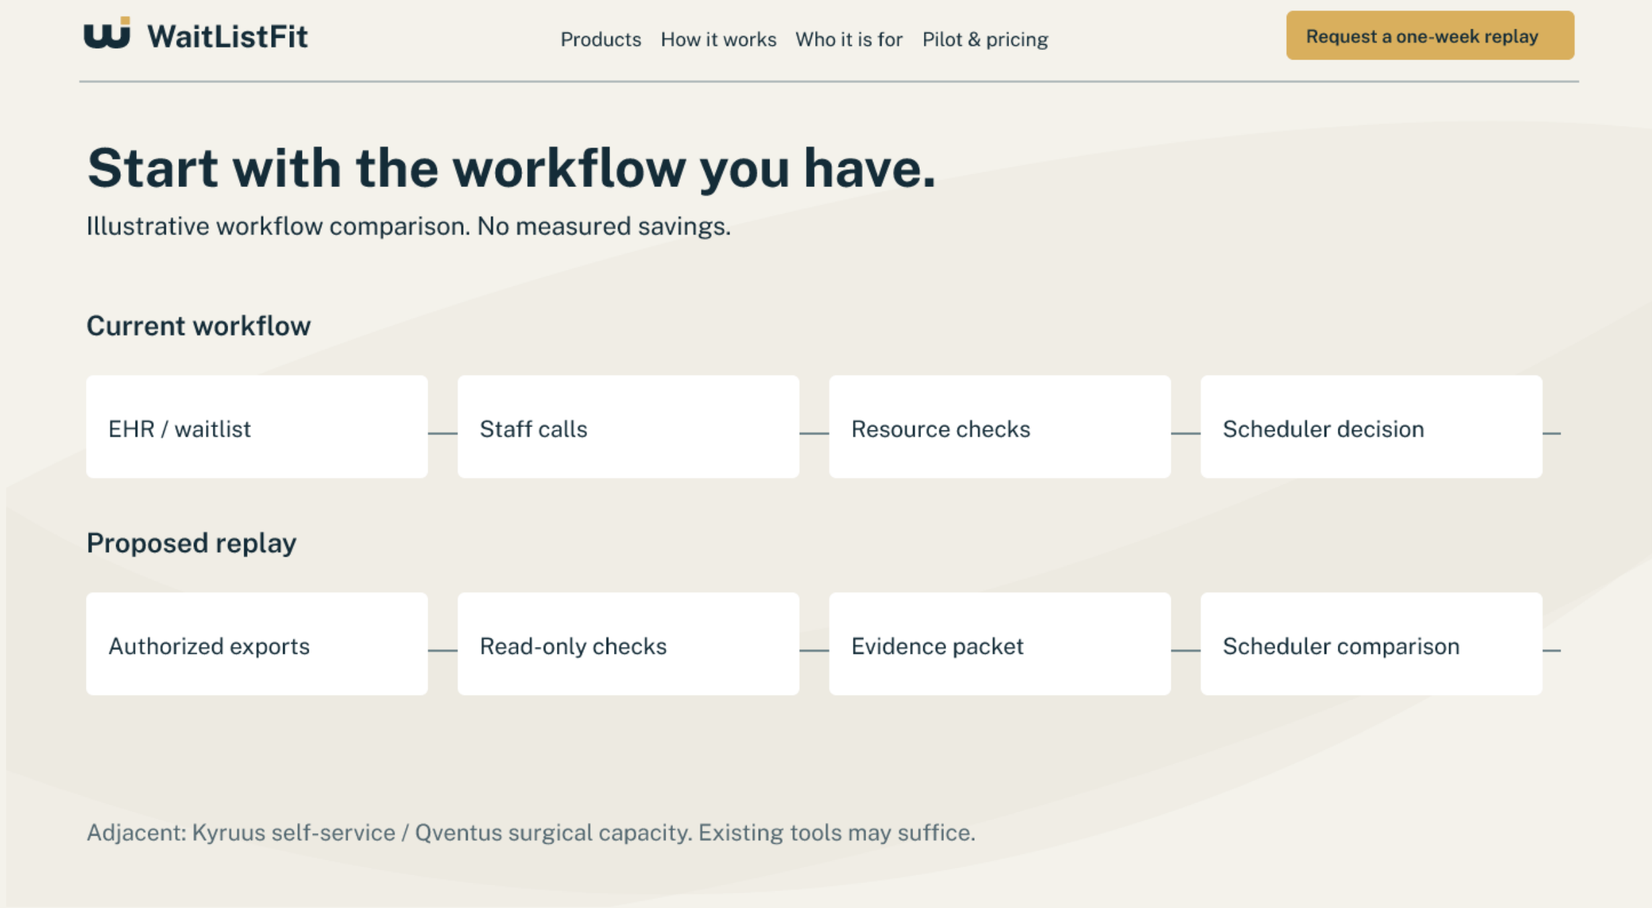

Warm stone at the perimeter; center remains near white.

Transition to the next scene
The packet settles beside existing EHR and staff workflow rails.

Mobile / reduced-motion reading order
Stack role stories; avoid drag-only access.

09 / Alternatives

Provisional desktop section height: 90svh / artboard: 1440 x 810

TRIGGER / ENTRY

Two process rails draw once on entry; labels stay visible.

VISIBLE RESTING STATE

Native EHR scheduling, staff/call centers, spreadsheets and self-service may already suffice. Kyruus is adjacent self-service; Qventus is adjacent surgical capacity.

BACKGROUND

Slightly deeper stone field signals comparison; no claims of measured efficiency.

Transition to the next scene

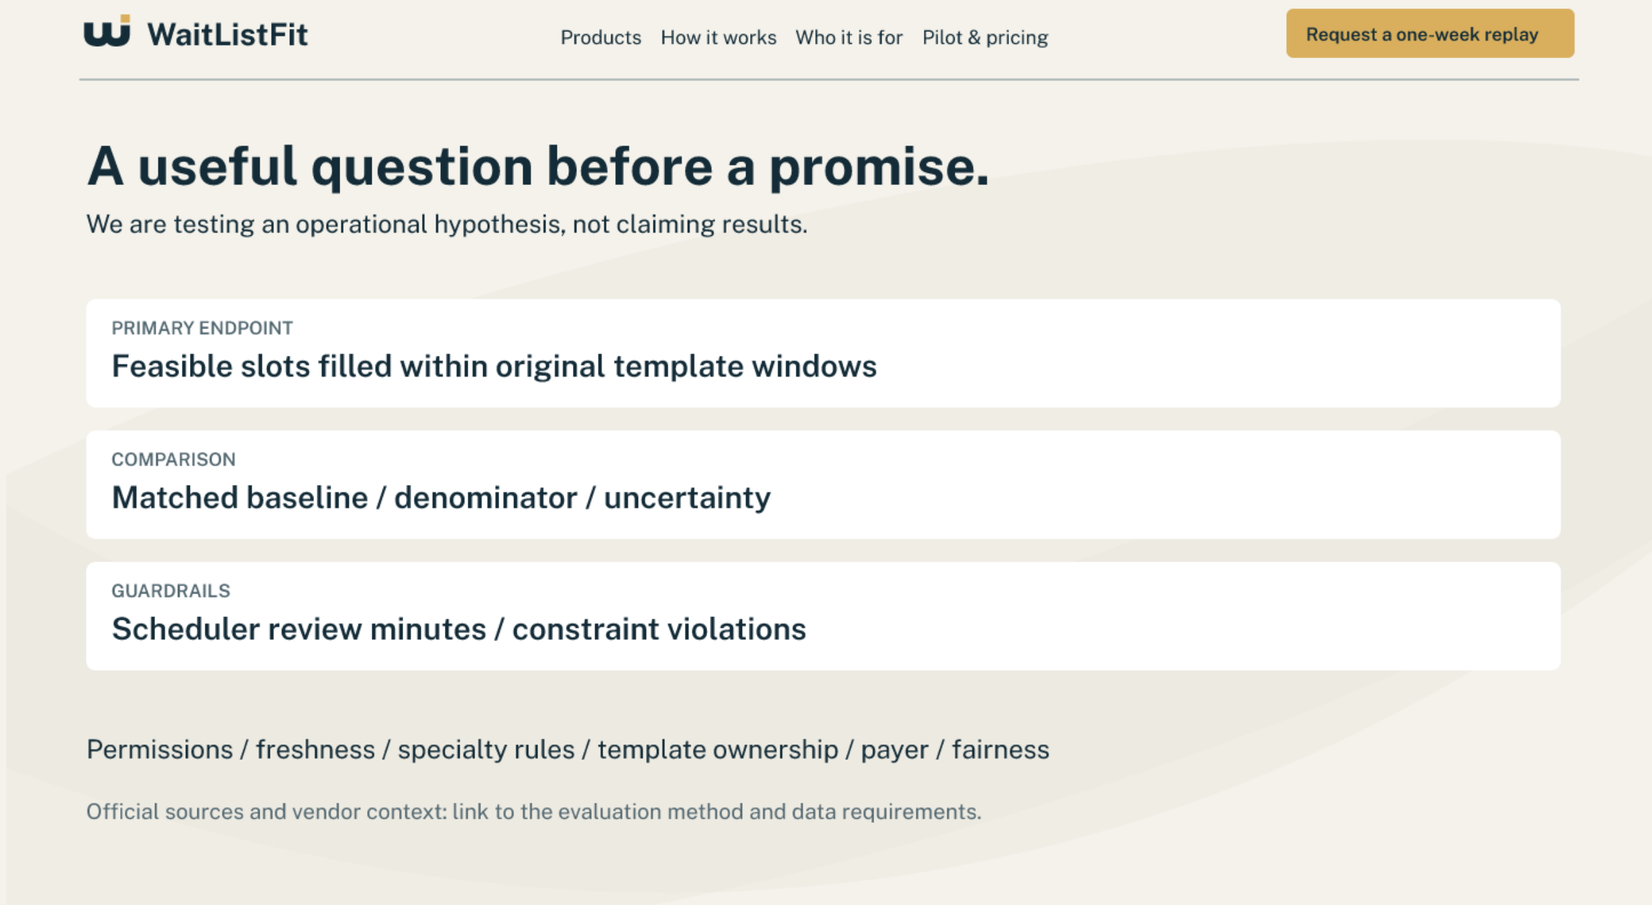

Both rails meet an evaluation scorecard rather than a celebratory outcome.

Mobile / reduced-motion reading order

Vertical before/after illustration with the same comparison caveats.

10 / Evidence

Provisional desktop section height: 100svh / artboard: 1440 x 810

TRIGGER / ENTRY

Source links open on explicit action. Metric labels do not count upward.

VISIBLE RESTING STATE

Measure feasible slots filled within original template windows against a matched baseline; record denominator and uncertainty. Guardrails: review minutes and constraint violations.

BACKGROUND

Cream reading surface, still background. Only source connectors animate.

Transition to the next scene

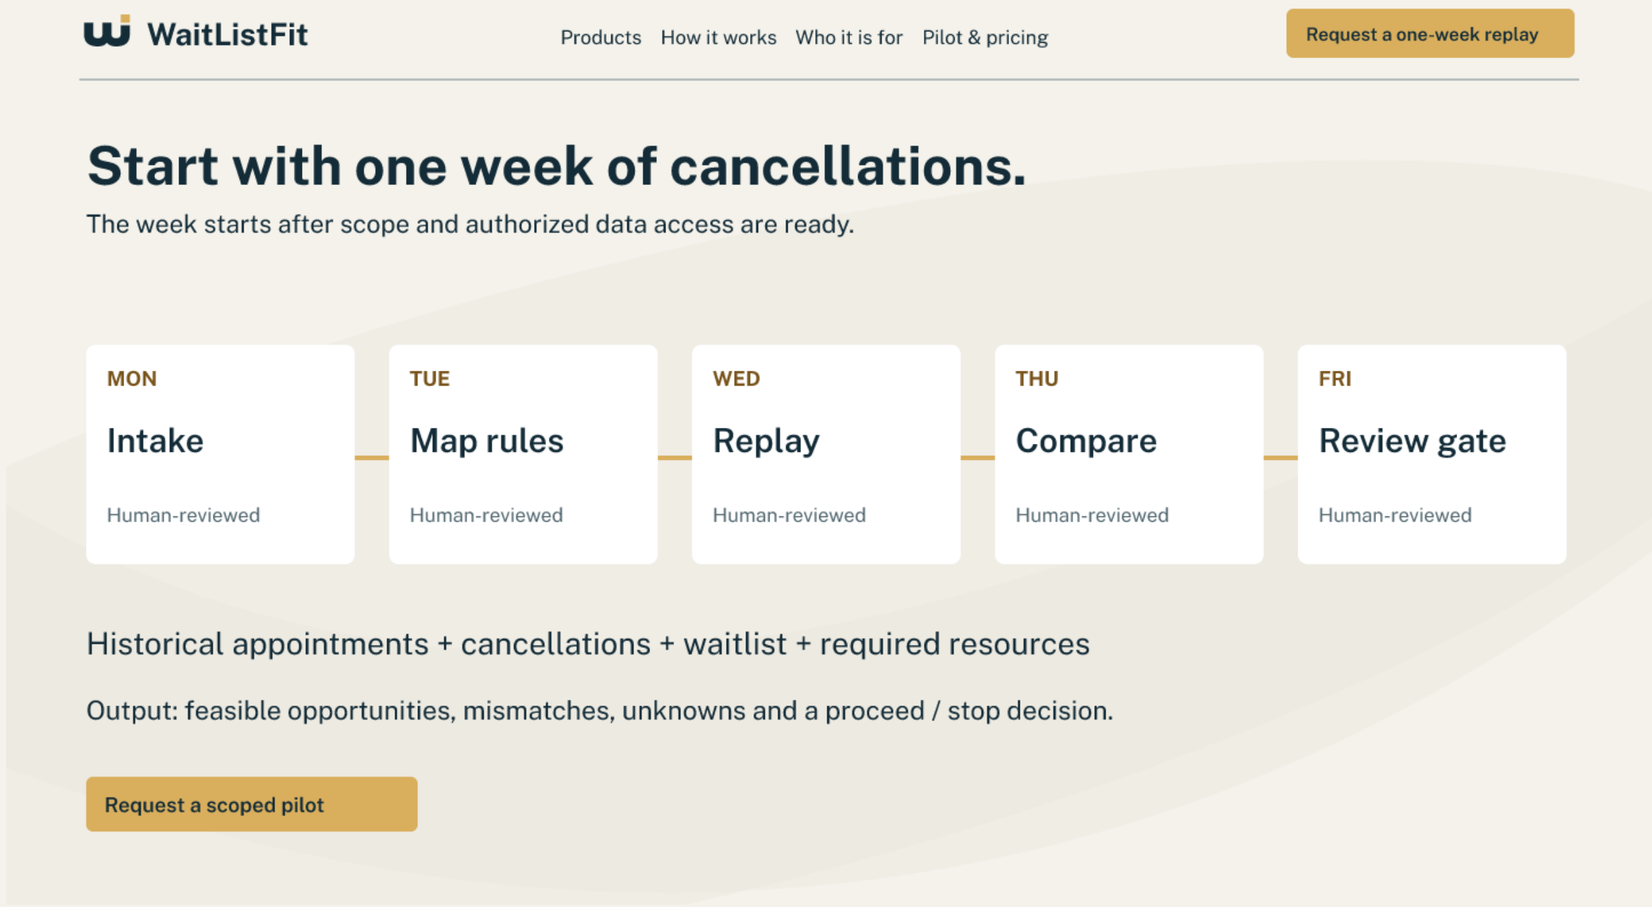

A source timestamp widens into the five-day replay line.

Mobile / reduced-motion reading order

Source list and scorecard as text/table. No hover-only citations.

11 / Replay

Provisional desktop section height: 100svh / artboard: 1440 x 810

TRIGGER / ENTRY

Scroll activates five day markers sequentially; clicking a day opens its scope.

VISIBLE RESTING STATE

After authorized scope/data readiness: intake, map rules, replay, compare with schedulers, review decision. Nothing is uploaded through this page.

BACKGROUND

The original timetable line returns, now a week. Warm amber accents five milestones.

Transition to the next scene

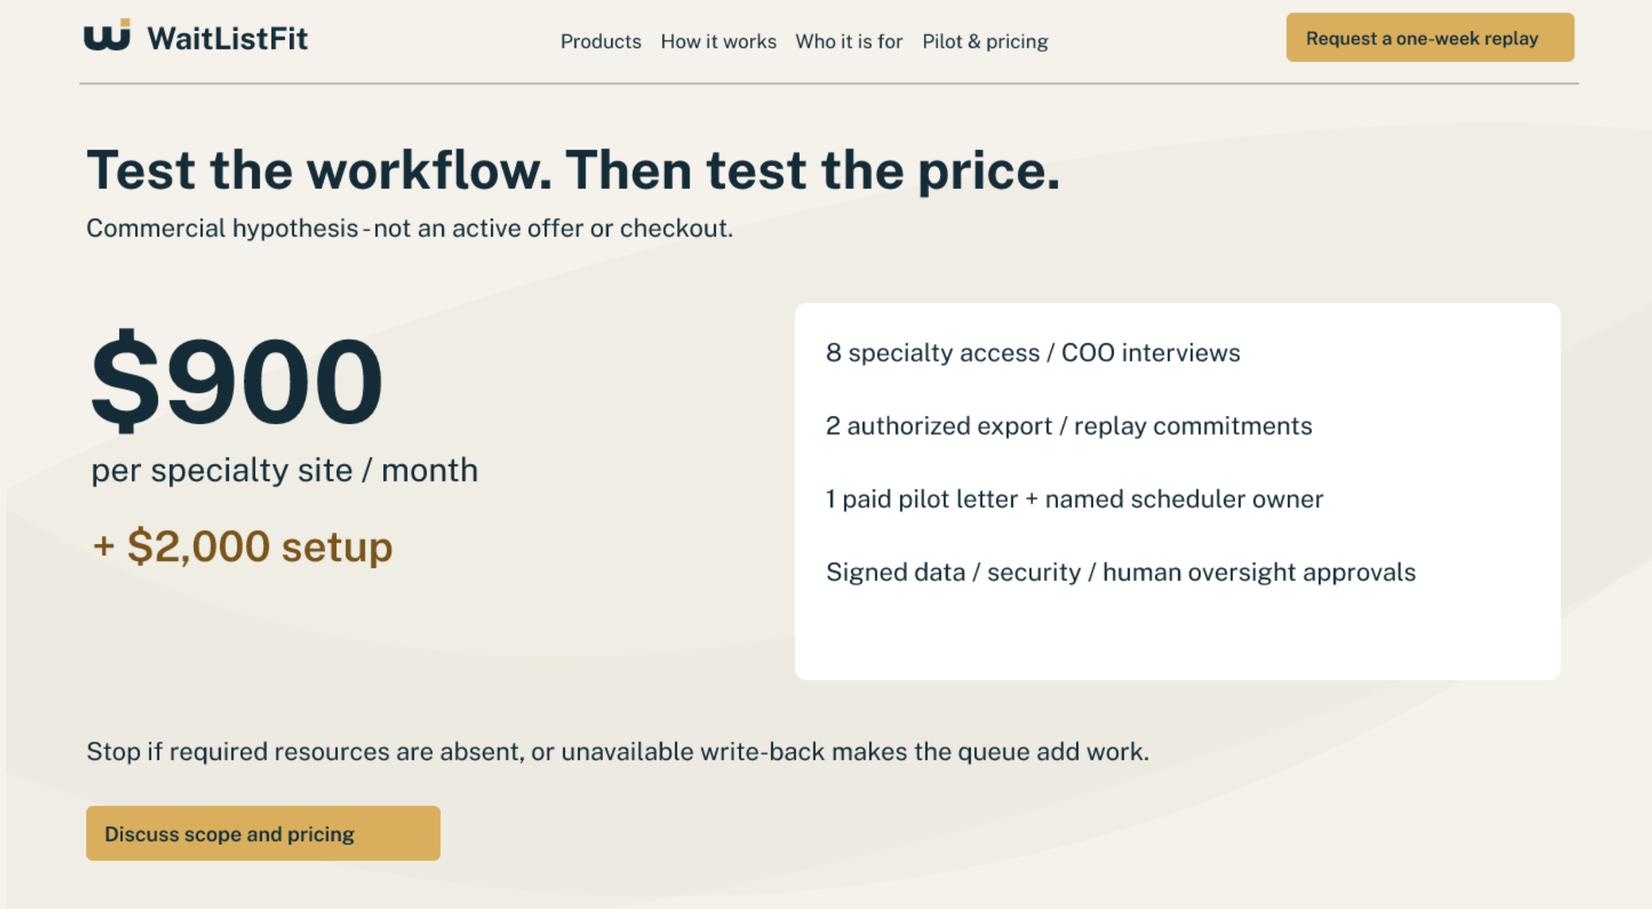

Final review marker aligns with the commercial hypothesis and readiness gate.

Mobile / reduced-motion reading order

Five stacked milestones; show prerequisites before the day list.

12 / Pricing

Provisional desktop section height: 80svh / artboard: 1440 x 810

TRIGGER / ENTRY

Single short entrance; no animated prices or tier carousel.

VISIBLE RESTING STATE

Hypothetical test price: $900 per specialty site/month + $2,000 setup. Test site vs provider budgeting. No checkout and no established separate replay price.

BACKGROUND

Quiet warm ivory; no kinetic or floating price card.

Transition to the next scene

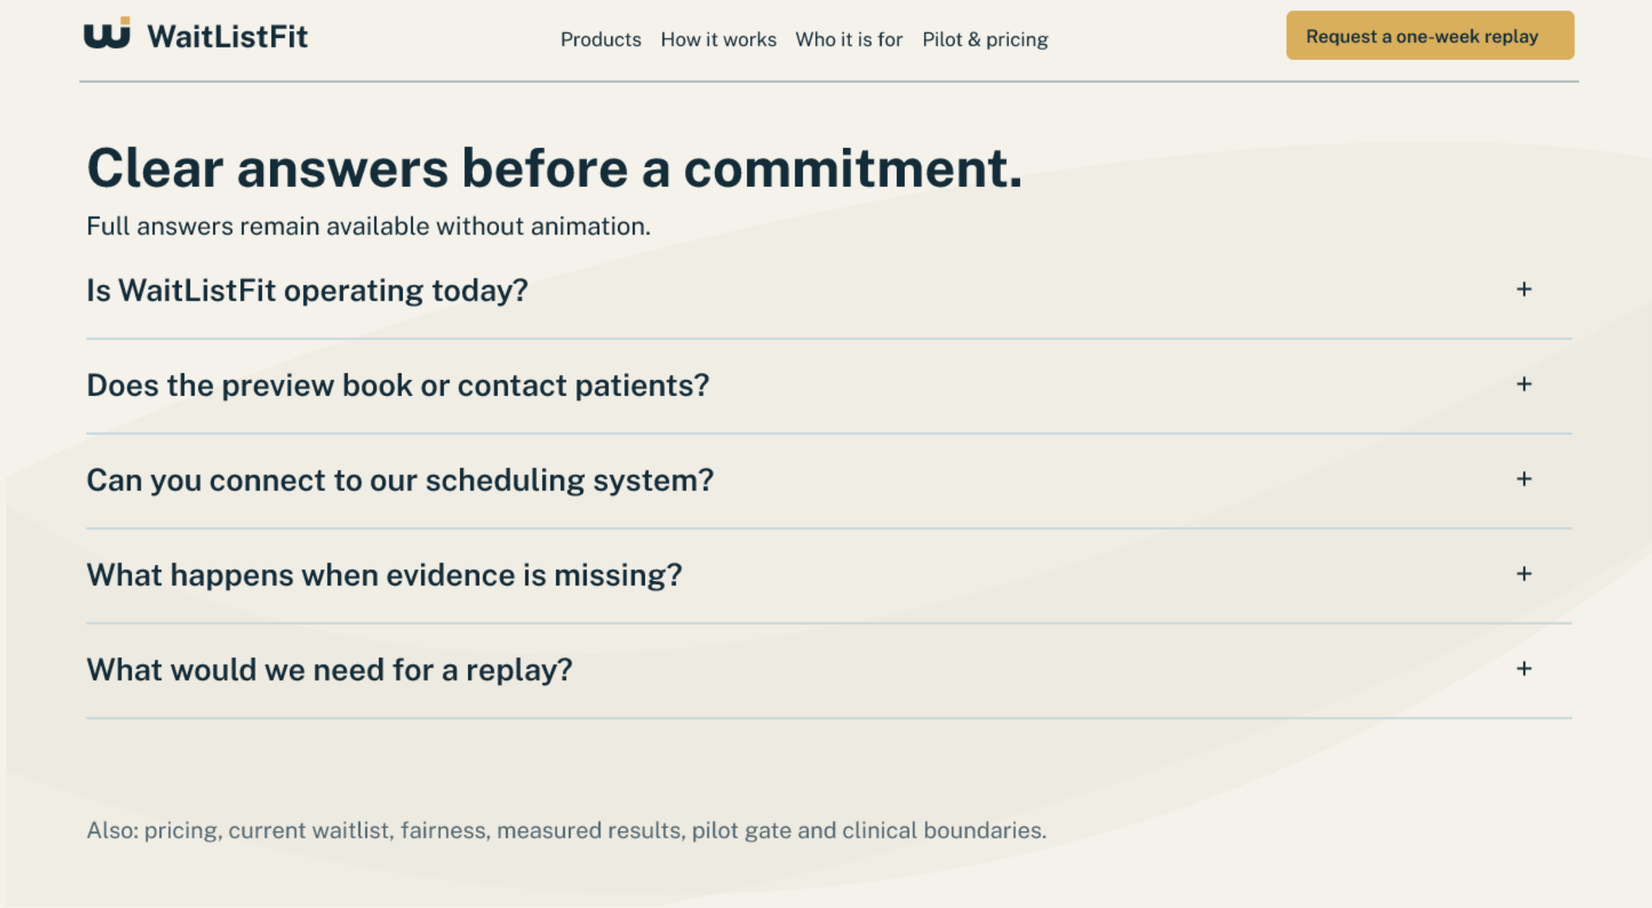

Price rule continues into FAQ; keep links to scope and evaluation nearby.

Mobile / reduced-motion reading order

One price block and full disclosures, with no tiny footnotes.

13 / Questions

Provisional desktop section height: Content-driven; estimate 90svh / artboard: 1440 x 810

TRIGGER / ENTRY

Accordion opens only on click/keyboard, 160ms maximum; state persists during scroll.

VISIBLE RESTING STATE

Answer availability, booking, messages, EHR access, current waitlist, data, unknowns, price, fairness, results, pilot prerequisites and clinical guidance.

BACKGROUND

Near-white cream, virtually static. The connector waits at the open question.

Transition to the next scene

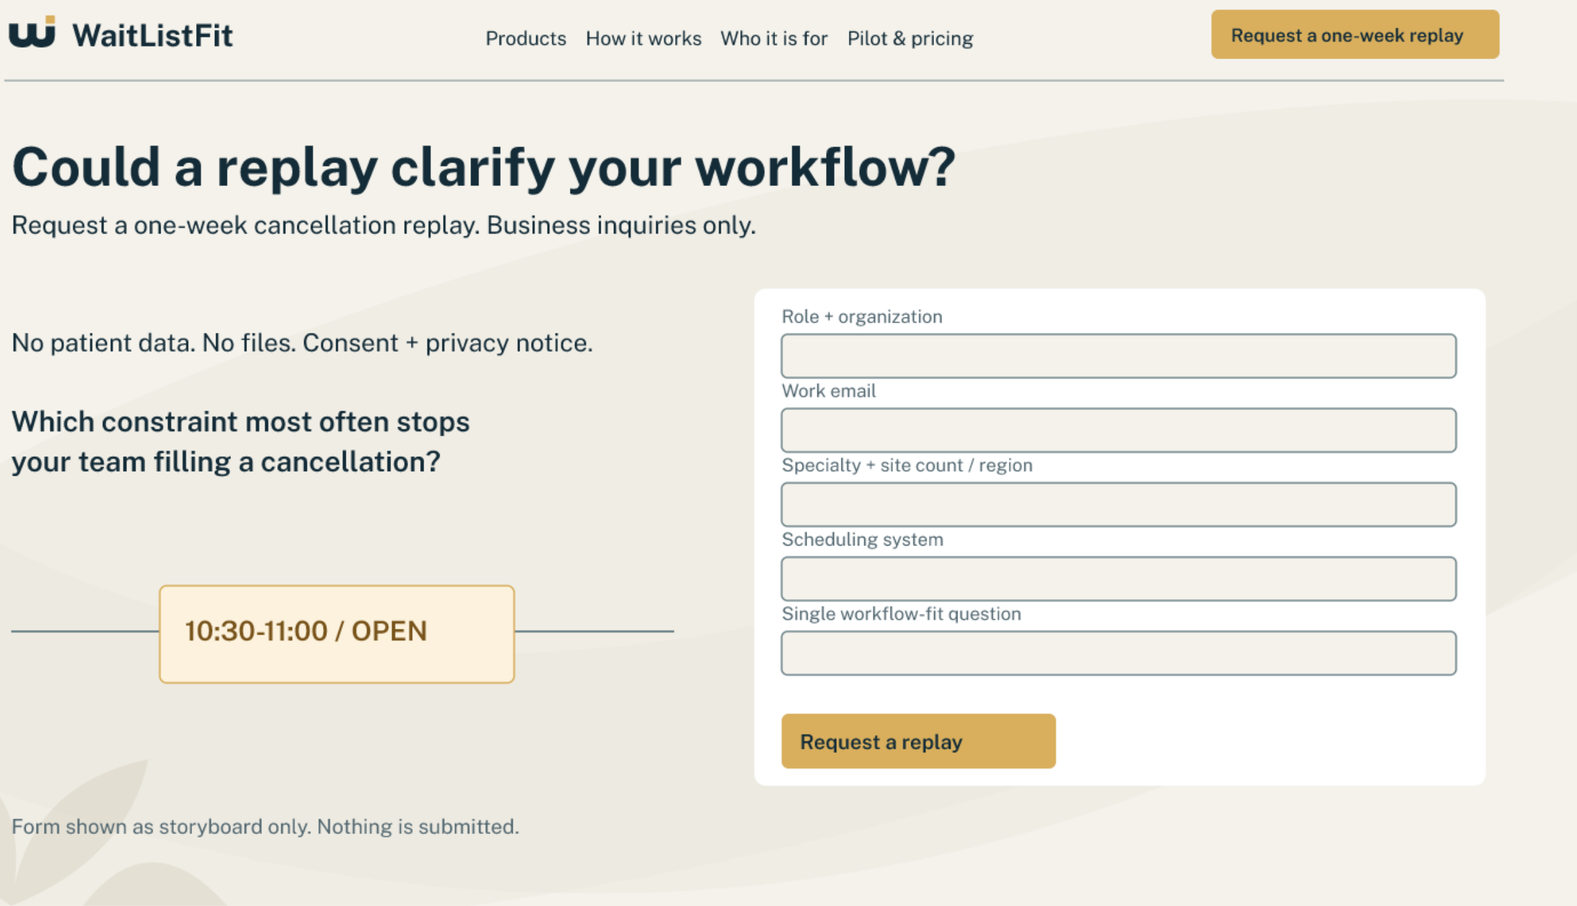

The final question resolves into the replay invitation; no forced completion of FAQs.

Mobile / reduced-motion reading order

Native disclosure controls; show open content inline.

14 / Invitation

Provisional desktop section height: 100svh; form content-driven / artboard: 1440 x 810

TRIGGER / ENTRY

The original 30-minute interval returns as an open question, not a booked slot.

VISIBLE RESTING STATE

Ask business role, organization, work email, specialty, site count/region, scheduling system and one workflow-fit question. No patient data or files.

BACKGROUND

Hero curves return subtly; warm ivory colors remain. Amber highlights the inquiry action.

Transition to the next scene

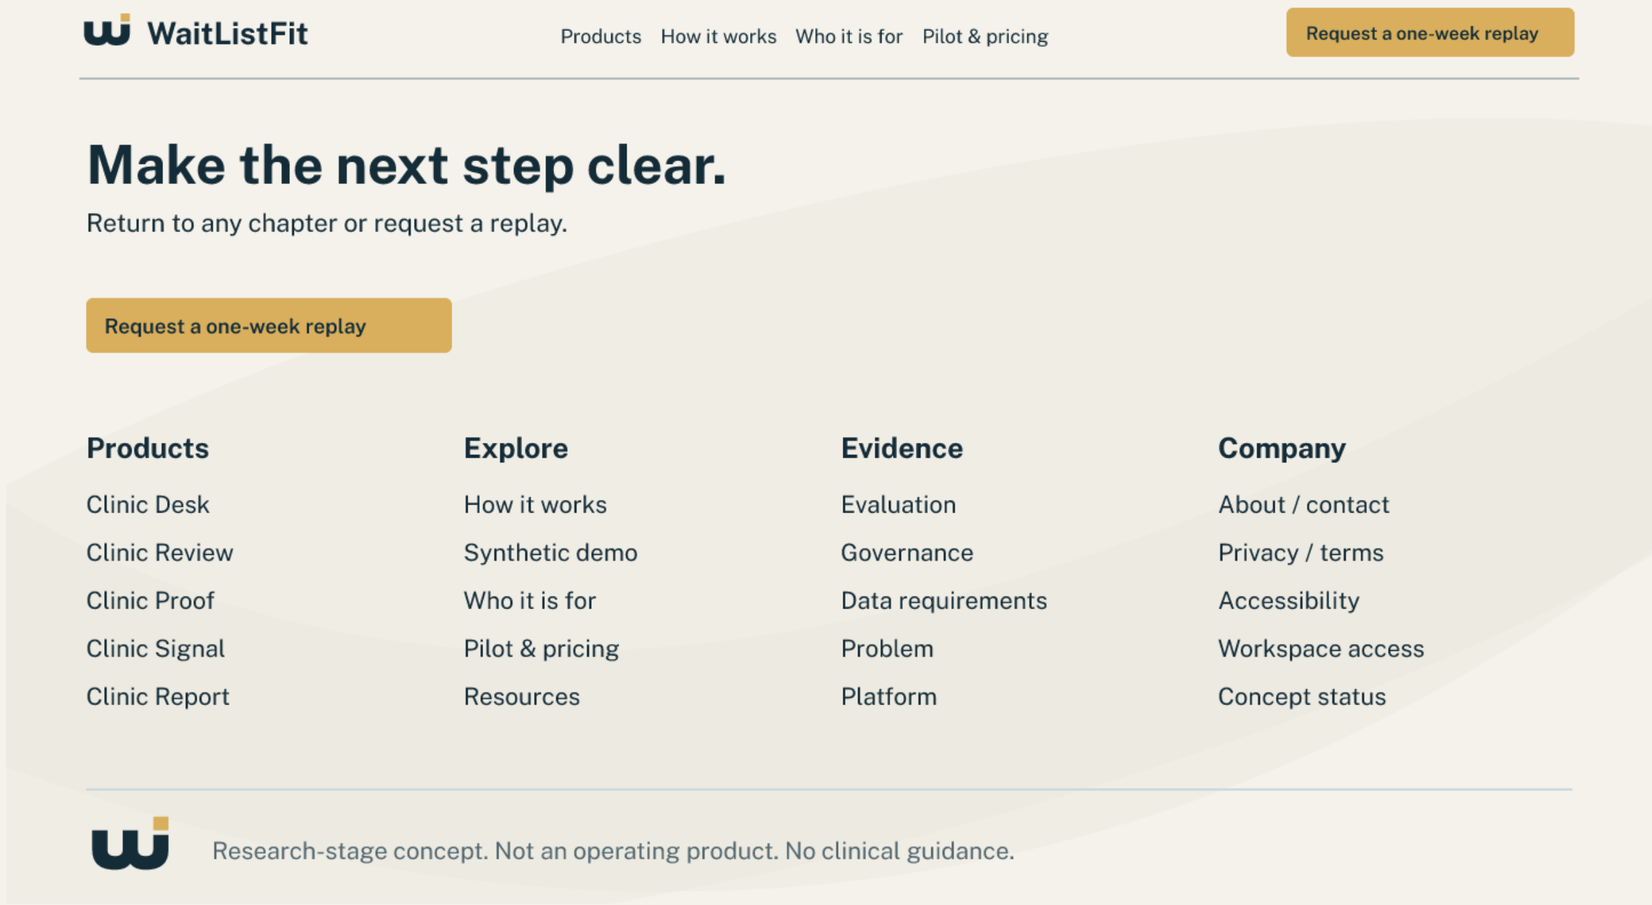

The timeline ends at the W symbol above the complete footer.

Mobile / reduced-motion reading order

One-column labelled form. Preserve entries and errors; never auto-scroll away from focus.

15 / Footer

Provisional desktop section height: 45svh minimum; content-driven / artboard: 1440 x 810

TRIGGER / ENTRY

No entrance animation required. A fine line ends at the W mark.

VISIBLE RESTING STATE

Direct links to products, demo, method, governance, data, pricing, company, contact, legal and access status. Only verified social URLs.

BACKGROUND

Warm ivory, fully settled. No looping animation or moving link targets.

Transition to the next scene

Navigation works directly; returning to the top restores the story without undoing a local review decision.

Mobile / reduced-motion reading order

Grouped links expand accessibly; no long pinned footer.

Interaction state is separate from scroll state

A story animation must never masquerade as a booked appointment.

OPEN	PENDING REVIEW	REVIEWED HANDOFF	RESET / REVERSE EVENT
Synthetic cancellation fixture	Recorded constraints can be inspected	Explicit local button only	Explicit reset or undo only

Visual result vs. domain state

The hero may show FILLED - SIMULATED after the visitor clicks, but the record is Reviewed handoff and the adjacent disclosure remains No appointment booked. The draft is UNSENT. Scroll position alone never creates or reverses an audit event.

Uncertainty branch

Missing or stale evidence leads to Needs clarification or Blocked. A source-version change reopens review. No invented confidence score and no conversion of unknown support needs into an automatic exclusion.

Fixture consistency

Tuesday 13 Oct 2026, America/New_York (ET). CV-03 effective 08:00; cancellation 08:55; snapshot 09:00; checks 09:04. Use the earlier IA fixture as canonical. The 09:06 handoff is a documented example, not a pre-executed action on first load. Queue: 9 cases; 2 Ready, 1 Needs clarification, 2 Blocked, 2 Pending, 1 Rejected, 1 Reviewed. Reviewing case 001 changes Ready to 1 and Reviewed to 2; total remains 9.

Mobile is the same story, re-composed

390px width / one readable column / native scrolling / no pinning

Hero	Candidate	Review	Replay
Full headline	CAND-A / room mismatch	Opened record	Data prerequisites
Primary + secondary CTA	Source disclosure	Constraint summary	Five stacked days
Compact status board	CAND-B / interpreter	Source + version + owner	Price hypothesis
DEMO label	Source disclosure	Simulate approval	Readiness / stop rule
Scroll cue	CAND-C / pending review	No appointment booked	Business inquiry

Below 900px wide, or on viewports shorter than 700px, stack the constraint sequence. The diagram is not a shrunken desktop image. Use 44px minimum touch targets, 16px body text, visible reasons, semantic headings and equivalent keyboard controls.

One motion language across supporting pages

Every route remains directly accessible. No route requires completing the homepage story.

Products + five modules	Use each module mini-scene as its opening. Local reveal, source-linked detail, scoped CTA.
How it works / problem / platform	Reuse the slot-to-evidence sequence. Direct anchors; avoid another long pinned intro.
Solutions + three buyer pages	Role-specific handoff packet and responsibilities. No customer-logo theater.
Demo	Click-driven queue, record, evidence and report. No autoplay decisions or scroll-controlled selection.
Pilot / pricing / evaluation	Five-day line, price hypothesis and metric definitions. No animated success counters.
Governance / data / resources	Still reading surfaces, source links and permission distinctions. Motion is optional.
About / contact / access / legal / 404	Simple entrances and stable navigation. Access page honestly states no active accounts.

Motion score and acceptance checks

These are implementation requirements for a future build, not claims of completed QA.

Timing
Micro feedback: 160ms. Scene state: 280ms. Split-flap: 420ms, 24ms stagger, maximum 900ms total. Ease: cubic-bezier(0.22, 1, 0.36, 1). No sounds, endless pulses or text scrambling.

Scroll structure
Sections 03-05 share one 250svh container: a 100svh sticky scene and 150svh of travel. Thirds of that travel expose constraints, candidates and review. Disable pinning on narrow/short screens; section heights expand for content. All other scenes use native flow.

Reading and control
Full headline on first render. One optional decorative source-note type reveal may run for 300ms; the real text already exists in the accessible DOM. Motion on/off is available; honor reduced motion from first render.

Resilience
Fast scroll lands on a complete readable state. Reverse scroll retraces the presentation only. Anchor links land below the sticky header. Resizing preserves state; no layout shift or focus trapping. Pause off-screen animations.

Acceptance: test 1440 x 810, 1280 x 720, 390 x 844 and 360 x 800; scroll down/up/rapidly; open an anchor; resize mid-scene; use keyboard and touch; toggle reduced motion. Confirm zero external booking/contact/network-write actions from demo controls and no loss of inquiry text.

Source of truth: the full IA and brief coverage remain authoritative for content. This storyboard supersedes their old hero art direction and reconciles the simulated FILLED display with the read-only Reviewed handoff state. No content scope is removed.
